

## PROFILE

- Second-year Computer Science Student based in Cluj-Napoca and Researcher at TUCN CGIS Research Group.
- Passionate about Game Development, Deep Learning, Embedded Systems and Cybersecurity.

## EDUCATION

### Bachelor, TUCN - Computer Science

October 2024 - Present

Year 1 Semester 1 GPA: 8.73

Year 1 Semester 2 GPA: 9.83

Year 2 Semester 1 GPA: 9.80

Year 2 Semester 2 GPA: 9.13

### 12 Week Course, TUCN's Cybersecurity seminars sponsored by Google inc.

March 2026 - June 2026

### Bacalaureat „Lucian Blaga” Theoretical HighSchool of Reghin, Mathematics and Informatics

English Intensive

2020-2024

## LANGUAGES

- Romanian - Native Speaker
- English - Fluent

# Alexandru-George Ghindă

## WORK EXPERIENCE

### Reasercher, TUCN Computer Graphics and Interactive Systems

*Cluj-Napoca / March 2026 - present*

- Full-Stack Architecture: Designed a full-stack clinical VR application using a React.js frontend, a Python/Flask REST API, and a Unity/C# client.
- Engineered a bidirectional networking pipeline to stream live gaze telemetry using JSON packets that are then processed into valuable gaze metrics and saved in a centralized Database.

## SKILLS

### Software Programming Languages

*C, C++, Java, GDScript, Assembly, MATLAB -Proficient*

*Python, PyTorch, C#, lua, Bash Scripting, JavaScript - Experienced*

### Hardware Development

*VHDL, AimSpice -Proficient*

### Tools & Technologies

*Godot, Unity, Git, Maven, React.js, Flask, RESTful API, Vivado - Proficient*

*Pandas, NumPy, Matplotlib - Experienced*

### Database Administration

*Certified by Oracle in SQL, PL/SQL, Database Foundations & Design*

**Projects on page 2**

# PROJECTS

## Train ticket vending machine - VHDL

*Developed a complex train ticket vending machine system in Vivado (handling ticket issuance and change calculation) as an end to the first year project.*

## Distributed system for step detection with wireless visual feedback (esp-now)

*Engineered a distributed wearable IoT system in C++ for real-time step detection and synchronized visual feedback. Utilized dual ESP32 microcontrollers, an MPU6050 accelerometer, and WS2812B LEDs. Designed a custom vector-magnitude algorithm for accurate motion processing and implemented ESP-NOW for ultra-low-latency, peer-to-peer wireless communication.*

## Hell/Re:Spawn

*Godot game: This is my soul project as I've been working on it for quite a while, it has the mechanics of Dispatch with the Rougelike progression of Balatro.*

# CONTESTS PROGRAMS HACKATHONS

## Polihack 2025, 4th place, CyberSecurity

*An AI-augmented nmap tool designed to help pentesters.*

## Polihack 2026, 2nd place, Embedded

*Developed a pipeline and built a demo for AR glasses that make communication between a person with a hearing deficiency and someone that doesn't know sign language possible.*

## ACM Style Contests

*CISM Timișoara - May 2026 tied on 3<sup>rd</sup> place.*

## Communicative

- \* 2 Erasmus+ projects, Photography and Art Related.*
- \* Multiple public speaking contests.*
- \* Student Organization projects.*

# HOBBIES

*Pixel art, Rock music, Strategy video games, Basketball and Sitcoms.*
